Department of Aviation's Commitment to Greenhouse Gas Emissions Reductions

As a vital member of the community, the City of Dallas Department of Aviation is committed to ensuring that our development and operations occur in a manner that promotes the sustainability of our natural environment. Utilizing the ISO 14001 Environmental Management System framework, designed to continuously and systematically improve our environmental performance, we set objectives and targets that improve the quality of air, land, and water.

In alignment with the Environmental Policy of the City of Dallas, the Department of Aviation is committed to a clean, safe, and healthy environment. Improvement of air quality is an essential component of this commitment to environmental stewardship. The Department of Aviation has prioritized advancing this effort through initiatives focused on greenhouse gas emissions reductions, increased energy efficiency and waste minimization. As a demonstration of this commitment, the Department of Aviation has set a goal of achieving a 10% reduction of greenhouse gas emissions below 2015 levels per enplaned passenger by 2025.

In support of this goal, the Department of Aviation will participate in the Airports Council International (ACI) Airport Carbon Accreditation Program. The ACI Airport Carbon Accreditation Program is a voluntary global carbon management standard for airports. This standard provides a framework and guidance for implementing best practices in carbon management with the ultimate objective of achieving carbon neutrality. Entering into this standard accreditation process will allow us to make significant strides to improve air quality and move towards a healthier and more sustainable future.

Mark Duebner
Director of Aviation
